

Versatile Industrial Steel Buildings Can Be Used For Just About Any Storage Purpose

Industrial steel buildings are versatile and strong and suitable for just about any purpose. Whether your needs are for light manufacturing space or storage for farm equipment, industrial steel buildings provide an inexpensive yet durable solution.

Industrial steel buildings come in several different design structures that are easy to assemble. The P series utilizes the more traditional design of straight sidewalls and arched roof and offers the greatest possible amount of usable space by raising the arch up to the top of the sidewalls. This gives you enough room for a backyard workshop or garage. The A series modifies the P series design by offering a 4 to 12 pitch roof for maximum strength and durability in high wind and snow areas. It, too, can be used as backyard workshop or garage. S series buildings have high, straight sidewalls and a curved arch roof that protects from heavy rain and snow accumulation. You have 100 percent usable vertical and floor space by virtue of the high sidewalls; this design grants you the ability to house small manufacturing, industrial and commercial operations or fire and airport fueling stations within its walls. You can even fit your recreational vehicle in an S series industrial steel building.

We now come to the Q series industrial steel building. Q series buildings, also known as Quonset huts, are some of the strongest structures in architecture because of their rounded corrugated arch design. These huts, named for Quonset, Rhode Island, the location of the naval base where the hut design was developed, were used extensively during World War II to house troops and equipment in the field. The design was so popular that some returning soldiers purchased the surplus huts to use for their personal housing after the war ended. Now, Q series buildings are put to use as airplane hangars and to house grain; their resistance to the worst of Mother Nature make them ideal for storage purposes.

Farmers also love industrial steel buildings. Farm machinery, grain, crops, horses and livestock all need strong, reliable protection from the elements. Industrial steel buildings are ideal for this purpose. Much more durable than the traditional wooden pole barn, these buildings are also maintenance free. Their size allows them to house large quantities of grain, crops and hay.

As you can see, industrial steel buildings are versatile enough to suit just about any purpose. You can even turn one into a guest cottage. Related Links [Steel aircraft hangar](#)
